Spreemühle Fürstenwalde renovates historical water wheel

After disassembling the historical water-power plant and transporting it from Schwarzwald to Fürstenwalde, the restoration of the water wheel has begun.

The assembling and the transport were carried out by Bohrgesellschaft Roßla.

Directly after its delivery to the GeoClimaDesign AG company grounds, the water wheel was assembled and prepared for operation.

In the coming weeks, it will be refurbished with new wood studs and restored to new splendour with the help of BBW Frankfurt Oder. The only thing left is the long awaited building permit.
