The GEO1 is a go

After exactly 2 years development time, the GEO1 project – dew-point driven control system has been successfully completed.

Together with the Consens GmbH and the designer Enrico Wilde, the new GeoClimaDesign AG control system was developed, tested and made ready for production. The R+D project was supported by the Federal Ministry of Economics and Technology (BMWi).

With the GEO-1 System, one of the most important prerequisites has been achieved for taking part in the Southern European and Asian markets for surface cooling systems.

Now that the first orders for the GEO-1 system have come in, all prerequisites for serial production have been met.
